WALKTHROUGH

This is only for completing the main quest.
However, feel free to explore the game as you like.

Someone ran a mechanism that put the whole universe in a time loop. Your purpose is to find about it, then stop the time loop, because the universe isn't able to progress while in it. Every loop resets at 3:14:07, January 2038, and throws you back 5 minutes ago.

You wake up near the bar. The first step is to go inside. Walk using the left and right arrows, or A and D. Talk to the bartender, and get the relative GPS code. It will be useful for later. Dialogue options: 1-2-1-1. The code revealed will be DA24532C. Save it for later.

Next, talk to Oevr. You'll get some ideas about the universe if you read the conversation. You can obtain another code from here. Dialogue options: 1-1-1-2-1-2-2-2-1-1-1. The code revealed will be @ENQVBYBT.
Save it for later, too. In general, you don't have to guess or remember the dialogue options. Just remember to be polite, and that will suffice.

Next, get out of the bar by walking to the left as much as you can. To the right of the screen, you will find a phone if you hover your

mouse over it. Put the code from the bartender in the GPS, it will give you coordinates such that the bar is at (0,0).

Next, in the LocLog app insert the code from Oevr. This will give you some data about a travel log. You have to use trigonometry to calculate the initial destination. Also, remember that the data is from the radio to the bar, so you have to compute it in reverse. You just have to use sin and cos in a triangle. After you compute it, you will get x: +16547, y: -11266. Now you have to get in your ship and go there, using the GPS.

If you are too far away from your ship, just press the Ship button in your phone and it will come to you. Driving the ship might seem difficult at first, because the controls are rather unusual, and you have to compensate for the inertia. The easiest way is to pay attention to the "compass" form the upper-left corner of the screen. With left/right or A/D the ship spins, setting the direction for travel. After inertia stops, the ship will align itself with the desired direction. Until you get used to seeing the direction, you can always follow the outer ring of the compass. Then, just wait until the ship aligns itself with it. The inner ring shows you the current direction the ship is facing. It will always align with the desired direction after a while.

Always check the time, while on the phone. The time resets at 3:14:07. It will respawn you near the bar.

After you reach the radio, inspect it, and you'll find information about the time loop, and the villain who runs the machine. You will get the code 8253FJ. Put it in the GPS, then go to (0,0) to find

Gadbuy. When you'll get to him, he won't let you touch the mechanism unless you play the russian roulette with him. He's confident, because even if he dies, the time reset will revive him. However, if you beat him and then insert the codes in the right order (similar to the low rider quest in GTA San Andreas), it disables the machine, and you win the game.
